
TinyMCE install problem

Posted by krizty - 2008/07/01 23:02

I installed the module in "\sites\all\modules\tinymce-5.x-1.9"
admin > sitebuilding> module then

I enable the module admin > sitebuilding> module then

I get the access control admin > Usermanagement > access control

After that, I tried to set up a new profile admin > site configuration > tinymce but it only indicated:

```
$Revision: 1.92 $ $Date: 2007/07/31 14:40:36 $
```

TinyMCE adds what-you-see-is-what-you-get (WYSIWYG) html editing to textareas. This editor can be enabled/disabled without reloading the page by clicking a link below each textarea.

Profiles can be defined based on user roles. A TinyMCE profile can define which pages receive this TinyMCE capability, what buttons or themes are enabled for the editor, how the editor is displayed, and a few other editor functions.

Lastly, only users with the access tinymce permission will be able to use TinyMCE.

And I cannot move on for the next section, and I hope someone will help me out with this
